GENERAL RECOMMENDATIONS

This product increases water penetration in certain soil aggregates by increasing the rate at which water soaks into the soil. It may reduce irrigation water run-off, which may also help eliminate dry and wet spots in the field.

DIRECTIONS FOR USE

SHAKE WELL BEFORE USING. Apply at 4 ounces/acre with each irrigation.

APPLICATION RATES

Spray: Apply with common spraying equipment prior to irrigation in a minimum of 60 gallons of water per acre.

Drip Systems: Apply during the first 25-50% of the total irrigation time. Inject directly into the drip system.

Sprinkler System: Apply during the first 25-50% of each set of the total water run time. Inject into the sprinkler system.

Flood or Border Irrigation: Apply continuously during 100% of the water run time. Meter or drip into the irrigation water at a point of turbulence.

IRRIGATION SYSTEM APPLICATION

Applications can be made through certain irrigation systems including, but not limited to, low volume systems and typical agricultural sprinkler systems. The specific injection equipment and irrigation system must conform to all federal, state and local regulations pertaining to the fertilization of plants through an irrigation system. Accurate and properly calibrated injection equipment and an irrigation system that is operated at maximum distribution uniformity will help avoid plant injury and/or product ineffectiveness. For best results, with the

exception of center pivot and lateral systems, apply this product toward the end of the irrigation set. Allow sufficient time for the product to be flushed completely out of the entire irrigation system prior to turning off the irrigation water. Contact your Certified Crop Advisor for specific recommendations for your area.
